Document Revision History

Version	Date	Description
0.10	5/4/2015	Initial draft
1.0	5/15/2015	Final draft, submitted for final approval.

1 Introduction

1.1 Purpose

The Corporations Screen Requirements document captures the contents of the screens that will be used to enter corporation data into the system both by the public and by internal staff. This document is meant to be used in conjunction with the Corporations Screen Parts document.

1.2 Scope

The Corporations Screen Requirements document covers only screens used for entering corporations data. Screen content requirements for charities, fundraisers, trusts, and trademarks screens are provided under separate cover.

1.3 Resources

The requirements contained in this document are based upon:

- Existing wireframes documents created by a prior Corporations and Charities Division vendor (Logic 20/20);
- Requirements produced out of internal Corporations and Charities Division screen requirements review sessions;
- In-depth reviews of existing wireframes and current law with Corporations and Charities Division subject matter experts; and
- The Corporations and Charities Division services documented and defined for this project in the Corporations and Charities System Services Catalog.

1.4 Constraints and Considerations

The following constraints and considerations apply to the requirements presented in this document:

- Screen part names are not intended as section headings to be displayed on-screen; screen part names are simply the means of identifying each screen part. Section headings have purposely not been defined in this document. In some cases, the same screen part could have different headings on different forms, and in other cases multiple screen parts could be presented under a single section heading. The intent is that section headings will be defined as part of the final form approval process during the system's development phase.
- Unnecessary duplication has been avoided where possible. When multiple entity types require identical screens, the screen requirements are documented for the first entity type and for the additional entity types the reader is instructed to refer to the first entity type.
- Rather than listing each field that should be presented on a screen, a screen's contents are presented by listing the screen parts that comprise that screen. A screen part is a field or control, or set of fields or controls. Images of the screen parts referenced in these requirements are presented under separate cover in the Corporations Screen Parts document. The intent is that the screen parts will be developed as components that can be used to construct each screen by calling the screen parts needed for that screen.

- There are up to three different views needed for each screen detailed in this document: Wizard, Advanced, and Staff Console. The Wizard and Advanced views are displayed to the public via the Web, and the Staff Console view is used by internal Corporations and Charities Division staff. Each screen requirements table in this document includes a matrix indicating to which view each screen part applies, using the headers Wiz, Adv, and SC.
- For some screen parts, different elements of the screen part apply to different views. In these situations, specific information is provided in the Notes column of the requirements table.

1.5 References

The following references were used in the development of the Staff Console User Stories document:

- Existing wireframes documents created by a prior Corporations and Charities Division vendor (Logic 20/20).
- Notes received from Corporations and Charities Division staff.
- Notes taken during requirements review meetings with Corporations and Charities Division staff.

1.6 Document Maintenance

This document will be updated during the project period should Corporations and Charities Division identify any desired changes to its future business processes.

This document contains a revision history log. When changes occur, the document's revision history log will reflect an updated version number. The date, the owner making the change, and the change description will also be recorded in the revision history log.
